Dual JK flip-flop**HEF4027B
flip-flops****DESCRIPTION**

The HEF4027B is a dual JK flip-flop which is edge-triggered and features independent set direct (S_D), clear direct (C_D), clock (CP) inputs and outputs (O, \bar{O}). Data is accepted when CP is LOW, and transferred to the output on the positive-going edge of the clock. The active HIGH asynchronous clear-direct (C_D) and set-direct (S_D) are independent and override the J, K, and CP inputs. The outputs are buffered for best system performance. Schmitt-trigger action in the clock input makes the circuit highly tolerant to slower clock rise and fall times.

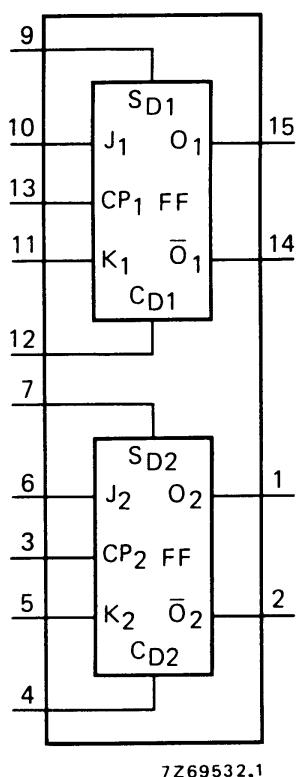

Fig.1 Functional diagram.

FUNCTION TABLES

INPUTS					OUTPUTS	
S_D	C_D	CP	J	K	O	\bar{O}
H	L	X	X	X	H	L
L	H	X	X	X	L	H
H	H	X	X	X	H	H

INPUTS					OUTPUTS	
S_D	C_D	CP	J	K	O_{n+1}	\bar{O}_{n+1}
L	L	/	L	L	no change	
L	L	/	H	L	H	L
L	L	/	L	H	L	H
L	L	/	H	H	\bar{O}_n	O_n

Notes

- 1. H = HIGH state (the more positive voltage)
- L = LOW state (the less positive voltage)
- X = state is immaterial
- / = positive-going transition
- O_{n+1} = state after clock positive transition

PINNING

- J,K synchronous inputs
- CP clock input (L to H edge-triggered)
- S_D asynchronous set-direct input (active HIGH)
- C_D asynchronous clear-direct input (active HIGH)
- O true output
- \bar{O} complement output

HEF4027BP(N): 16-lead DIL; plastic (SOT38-1)

HEF4027BD(F): 16-lead DIL; ceramic (cerdip) (SOT74)

HEF4027BT(D): 16-lead SO; plastic (SOT109-1)

APPLICATION INFORMATION

Some examples of applications for the HEF4027B are:

- Registers
- Counters
- Control circuits
