Description

The 8617 Super Thermal Grease III is a low thermal resistance, non-corrosive grease. It uses an extremely thermal stable synthetic oil that is electrically insulating. It is used to improve the thermal interface contact conductivity between heat sinks, LEDs, motors, and heat-generating electronic components such as CPUs, GPUs, and power components. This grease improves the thermal interface between irregular and pitted surfaces.

Benefits & Features

- Silicone and ZnO free
- High thermal conductivity
- Lowers the contact resistance between irregular surfaces
- Extends the life of electronic components
- · Electrically insulating
- Non-bleeding
- Safe on plastics

Storage

Store between -10 and 40 °C [14 and 104 °F] in dry area.

Health, Safety, and Environmental Awareness

Please see the 8617 **Safety Data Sheet** (SDS) for greater details on transportation, storage, handling and other security guidelines.

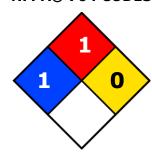

Environmental Impact: The VOC (volatile organic compound) content is 69% [31 g/L] by WHMIS and European standards. Not regulated as a dangerous good for transport.

Health and Safety: Wear safety glasses and disposable gloves to avoid exposures.

Application Instructions

The conductive grease performance depends on mainly on surface preparation. Improperly prepared contact surfaces can degrade the paste's stability, conductivity, and lubrication characteristics. While the thickness and coverage are also important, the application method itself can easily be adjusted according to performance and application needs.

Prerequisites

- Wear gloves and protective clothing.
- Clean and dry the surface of the substrate to remove other oils and greases, as well as dust, water, solvents, or any other contaminants.
- Recommendations: Use MG 824 Isopropyl Alcohol or MG 4351 Thinner

Equipment

- Lint free cloth (for cleaning contact and for wiping excess residue)
- Spatula or stick application tools (sized appropriately for your application)
- Isopropyl alcohol or other residue-free organic solvents

To apply the grease

- 1. Wipe the contact with a lint-free cloth.
- 2. Clean the contacts with isopropyl alcohol or other non-oil based cleaner.
- 3. Once dry, spread grease in a thin layer onto the surface.
