

## RF power transistor: HF/VHF/UHF N-channel power MOSFETs

Datasheet - production data

**Figure 1. Pin connection**

- $P_{OUT} = 150 \text{ W min. with } 14 \text{ dB gain @ } 175 \text{ MHz}$
- Thermally enhanced packaging for lower junction temperatures

### Description

The SD2931-10 is a gold metalized N-channel MOS field-effect RF power transistor. Being electrically identical to the standard SD2931 MOSFET, it is intended for use in 50 V dc large signal applications up to 230 MHz.

The SD2931-10 is mechanically compatible to the SD2931 but offers in addition a better thermal capability (25% lower thermal resistance), representing the best-in-class transistors for ISM applications, where reliability and ruggedness are critical factors.

## Features

- Gold metalization
- Excellent thermal stability
- Common source configuration
